

Memo

To: All Staff

Subject: Urgent Cybersecurity Notice: Protecting Against NetWalker Ransomware Threat

Team,

I need to bring something serious to your attention. Our organization, along with many others in the healthcare sector, is currently under attack by cybercriminals using a new and dangerous Windows ransomware campaign. These attackers are exploiting the ongoing COVID-19 pandemic as a means to infiltrate our systems and hold our data hostage.

This situation is not just about technology; it's about the safety and security of our patients and our staff. The thought of cybercriminals infiltrating our systems and compromising patient data is deeply concerning and could have far-reaching consequences. We cannot afford to underestimate the gravity of this threat.

I understand that many of you are already under immense pressure due to the pandemic, and the last thing you need is to worry about cybersecurity. But the reality is, we must all be vigilant and proactive in protecting our organization against these threats.

Given our current remote working environment, it's crucial that we adapt our communication strategies to ensure that everyone receives this important message. We will leverage a combination of technology tools and modalities to disseminate information in a clear and concise way:

1. Email: We will send out regular email updates to all staff members, outlining the latest developments regarding the NetWalker ransomware threat and providing guidance on how to stay safe online.
2. Virtual Meetings: We will schedule virtual town hall meetings and departmental briefings to discuss cybersecurity best practices and address any concerns or questions that staff may have.
3. Intranet: We will update our intranet with dedicated cybersecurity resources, including FAQs, training materials, and contact information for reporting suspicious activity.
4. Instant Messaging: We will utilize instant messaging platforms to send out real-time alerts and reminders about cybersecurity risks and preventative measures.
5. Training Modules: We will develop interactive online training modules covering topics such as phishing awareness, password security, and safe browsing habits.

This is not just a technology issue; it's a cultural issue. We need to foster a culture of cybersecurity awareness and accountability across our organization. Each and every one of us plays a crucial role in protecting our systems and data.

I know that we are all facing unprecedented challenges right now, but I have full confidence in our ability to overcome this threat together. By working together and prioritizing cybersecurity, we can safeguard the integrity of our operations and protect the well-being of our patients.

Thank you for your attention to this matter.

Sincerely,

Leadership
